## What is Cryptocurrency?

Cryptocurrency is a form of digital money that is designed to be secure and, in many cases, anonymous. It is a currency associated with the Internet that uses cryptography, the process of converting legible information into an almost uncrackable code, to track purchases and transfers.

Cryptography was born out of the need for secure communication in the Second World War. It has evolved in the digital era, with elements of mathematical theory and computer science, to become a way to secure communications, information and money online.

The first cryptocurrency was Bitcoin, which was created in 2009 and is still the best known. There has been a proliferation of cryptocurrencies in the past decade and there are now more than 1,000 available on the Internet. Bitcoin is now worth more than \$11,000 as of December 2017.

## Types of Cryptocurrencies

Bitcoin has become the leader in shepherding in a wave of cryptocurrencies built on a decentralized peer-to-peer network. It has become the primary standard for cryptocurrencies. The currencies inspired by Bitcoin are collectively called Altcoins and have tried to present themselves as modified or improved versions of Bitcoin. While some of these currencies are easier to mine than Bitcoin is, there are tradeoffs, including greater risk brought on by a degree of lesser liquidity, acceptance and value retention. Below is a list of the five most popular cryptocurrencies that our clients have been investing in with their retirement funds:

**1. Bitcoins:** Bitcoin is a new currency that was created in 2009 by an unknown person using the alias Satoshi Nakamoto. Transactions are made with no middle men – meaning, no banks! There are no transaction fees and no need to give your real name. Because Bitcoin was the first cryptocurrency to exist, all digital currencies created since then are called Altcoins, or alternative coins. One of the advantages of Bitcoin is that it can be stored offline on a person's local hardware. That process is called cold storage and it protects the currency from being taken by others. When the currency is stored on the Internet somewhere (hot storage), there is high risk of it being stolen. On the other side, if a person loses access to the hardware that contains the Bitcoins, the currency is simply gone forever. It's estimated that as much as \$30 billion in Bitcoins have been lost or misplaced by miners and investors. In any event, Bitcoins remain incredibly popular as the most famous cryptocurrency over time.

**2. Ethereum (ETH) & Ethereum Classic:** Ethereum, launched in 2015, is a decentralized software platform that enables Smart Contracts and Distributed Applications (D-Apps) to be built and run without any downtime, fraud, control or interference from a third party. The applications on Ethereum are run on its platform-specific cryptographic token, Ether. Ether is like a vehicle for moving around on the Ethereum platform and is sought by mostly developers looking to develop and run applications inside Ethereum. According to Ethereum, it can be used to codify, decentralize, secure and trade just about anything.

Ethereum Classic is one of two separate versions of Ethereum's block chain, along with Ethereum itself. The split occurred after The DAO, a decentralized autonomous organization based on Ethereum, got hacked in June 2016 and \$50 million worth of its funds were stolen. Because the DAO was crowdfunded, this event has resulted in a large number of people losing their stakes. After several weeks of heated debate, the community has decided to conduct a "hard fork" of Ethereum's block chain in order to "code" the stolen money back to its owners. In order to perform the hard fork, the majority of the users had to simultaneously take all the transaction records prior to the point of the hacking and start anew from there, while discarding all transactions which have happened after that, including the hackers. Ethereum is the new one and the old one was renamed Ethereum Classic.

**3. Litecoin (LTC):** Litecoin, launched in the year 2011, was among the initial cryptocurrencies following Bitcoin. Litecoin was created by Charlie Lee, an MIT graduate and former Google engineer. Litecoin is based on an open source global payment network that is not controlled by any central authority and uses "script" as a proof of work, which can be decoded with the help of CPUs of consumer grade. Although Litecoin is like Bitcoin in many ways, it is believed to have a faster block generation rate and hence offers a faster transaction confirmation.

**4. Zcash (ZEC):** Zcash, a decentralized and open-source cryptocurrency launched in the latter part of 2016, offers privacy and selective transparency of transactions. Zcash claims to provide extra security or privacy where all transactions are recorded and published on a block chain, but details such as the sender, recipient, and amount remain private. Zcash offers its users the choice of "shielded" transactions, which allow for content to be encrypted using advanced cryptographic technique or zero-knowledge proof construction called a zk-SNARK, developed by its team.

**5. Dash:** Dash (originally known as Darkcoin) is a more secretive version of Bitcoin. Dash offers more anonymity as it works on a decentralized master code network that makes transactions almost untraceable. Launched in January 2014, this cryptocurrency was created and developed by Evan Duffield and can be mined using a CPU or GPU.

## What is Bitcoin Mining?

Bitcoin mining is the process by which transactions are verified and added to the public ledger, known as the block chain, and also the means through which new Bitcoin are released. Anyone with access to the Internet and suitable hardware can participate in mining. The mining process involves compiling recent transactions into blocks and trying to solve a computationally difficult puzzle. The participant who first solves the puzzle gets to place the next block on the block chain and claim the rewards. The rewards, which incentivize mining, are both the transaction fees associated with the transactions compiled in the block as well as newly released Bitcoin.

The amount of new Bitcoin released with each mined block is called the block reward. The block reward is halved every 210,000 blocks, or roughly every 4 years. The block reward started at 50 in 2009, was 25 in 2014, and will continue to decrease. This diminishing block reward will result in a total release of Bitcoin that approaches 21 million.

## How Are Bitcoins Tracked?

A Bitcoin holds a very simple data ledger file called a block chain. Each block chain is unique to each individual user and his/her personal Bitcoin wallet.

All Bitcoin transactions are logged and made available in a public ledger, helping ensure their authenticity and preventing fraud. This process helps to prevent transactions from being duplicated and people from copying Bitcoins.

While every Bitcoin records the digital address of every wallet it touches, the Bitcoin system does NOT record the names of the individuals who own wallets. In practical terms, this means that every Bitcoin transaction is digitally confirmed but is completely anonymous at the same time. Hence, people cannot easily see your personal identity, however, they will be able to see the history of your Bitcoin wallet.

## How to Hold Cryptocurrencies Owned by a Retirement Account?

Cryptocurrencies are generally as secure as possessing physical precious metal. Just like holding a gold bar, a person who takes reasonable precautions will be safe from having their personal cache stolen by hackers.

**THE IRA FINANCIAL GROUP**

Unlocking a World of Investment Opportunities  
244 Fifth Avenue Suite # 1798 New York, NY 10001  
New York | Miami

1-800-IRA-0646

A Bitcoin wallet can be stored online (i.e. a cloud service) or offline (a hard drive or USB stick). The offline method is more hacker-resistant and absolutely recommended for anyone who owns more than 1 or 2 Bitcoins, but it is not without risk. Your Self-Directed 401(k) Plan should have a separate wallet, either online or offline, for the cryptocurrencies owned by the Self-Directed 401(k). The Solo 401(k) Plan owned wallet should not hold any cryptos purchased with non-retirement funds. In other words, a Bitcoin wallet should not hold retirement account owned and personally owned cryptos.

More than hacker intrusion, the real loss risk with Bitcoins revolves around not backing up your wallet with a failsafe copy. There is an important .dat file that is updated every time you receive or send Bitcoins, so this .dat file should be copied and stored as a duplicate backup every day you do bitcoin transactions.

## How are Cryptocurrencies Treated by the IRS?

Even though Bitcoin is labeled as a “cryptocurrency”, from a federal income tax standpoint, Bitcoins and other cryptocurrency are not considered a “currency.” On March 25, 2014, the IRS issued Notice 2014-21, which for the first time set forth the IRS position on the taxation of virtual currencies, such as Bitcoins. According to the IRS Notice, “virtual currency is treated as property for U.S. federal tax purposes.” The Notice further stated, “general tax principles that apply to property transactions apply to transactions using virtual currency.” In other words, the IRS is treating the income or gains from the sale of a virtual currency, such as Bitcoins, as a capital asset, subject to either short-term (ordinary income tax rates) or long-term capital gains tax rates, if the asset is held greater than twelve months (15% or 20% tax rates based on income). By treating Bitcoins and other virtual currencies as property and not currency, the IRS is imposing extensive record-keeping rules - and potentially significant taxes - on its use.

## Does the IRS Allow Retirement Accounts to Purchase Cryptocurrencies?

The Internal Revenue Code does not describe what a Self-Directed IRA or Solo 401(k) Plan can invest in, only what it *cannot* invest in. Internal Revenue Code Sections 408 & 4975 prohibit Disqualified Persons from engaging in certain types of transactions. The foundation of the prohibited transaction rules is based on the premise that investments involving the 401(k) Plan participant and related parties are handled in a way that benefits the retirement account and not the 401(k) Plan participant. The rules prohibit transactions between the 401(k) and certain individuals known as “disqualified persons”. The definition of a “disqualified person” (Internal Revenue Code Section 4975(e)(2)) extends into a variety of related party scenarios, but generally includes the 401(k) Plan participant, any ancestors or lineal descendants of the 401(k) Plan participant, and entities in which the 401(k) Plan participant holds a controlling equity or management interest.

Because the IRS treats cryptocurrencies, such as Bitcoins, as a capital asset, such as stocks or real estate, a retirement account is permitted to buy, sell, or hold cryptocurrencies, subject to the prohibited transaction rules found under Internal Revenue Code Section 4975(c).

## Am I eligible to Adopt a Solo 401(k) Plan?

To be eligible to benefit from the Solo 401(k) Plan, an individual must meet just two eligibility requirements:

- (i) The presence of self-employment activity.
- (ii) The absence of full-time employees.

### The Presence of Self Employment Activity

Self-employment activity generally includes ownership and operation of a sole proprietorship, Limited Liability Company (LLC), C Corporation, S Corporation, Limited Partnership, or any other entity type where the business intends to generate revenue for profit and make significant contributions to the plan. In general, the business establishing the Solo 401(k) does not have to be the individual's sole source of employment, however, the individual should earn either Schedule C, in the case of a sole proprietorship or single member LLC, W-2 income, in the case of a C or S corporation, or guaranteed payments in the case of partnerships. The business activity can be part-time and technically the business does not even have to be profitable, however, the activity must rise to the level of a trade or business.

### The Absence of Full-Time Employees

Unlike a regular 401(k) Plan, a Solo 401(k) Plan can be implemented only by self-employed individuals or small business owners who have no other full-time employees other than the owner(s) or their spouse(s). The business owner and their spouse are technically considered "owner-employees" rather than "employees."

The following types of employees may be generally excluded from coverage:

- Employees under 21 years of age
- Employees that work less than 1,000 hours annually
- Union employees
- Nonresident alien employees

## Why Choose a Solo 401(k) Plan vs. a Self-Directed IRA LLC to Purchase Cryptocurrencies?

There are a number of options that are specific to Solo 401(k) Plans that make the Solo 401(k) Plan a far more attractive retirement option for a self-employed individual than a Traditional IRA for a self-employed individual.

**1. Reach your Maximum Contribution Amount Quicker:** A Solo 401(k) Plan includes both an employee and profit sharing contribution option, whereas, a Traditional IRA has a very low annual contribution limit. Under the 2019 Solo 401(k) contribution rules, a plan participant under the age of 50 can make a maximum employee deferral contribution in the amount of \$19,000. That amount can be made in pre-tax or after-tax (Roth). On the profit sharing side, the business can make a 25% (20% in the case of a sole proprietorship or single member LLC) profit sharing contribution up to a combined maximum, including the employee deferral, of \$56,000, an increase of \$1,000 from 2018.

For plan participants over the age of 50, an individual can make a maximum employee deferral contribution in the amount of \$25,000. That amount can be made in pre-tax or after-tax (Roth). On the profit sharing side, the business can make a 25% (20% in the case of a sole proprietorship or single member LLC) profit sharing contribution up to a combined maximum, including the employee deferral, of \$62,000, an increase of \$1,000 from 2018.

Whereas, a Traditional Self-Directed IRA would only allow an individual with earned income during the year to contribute up to \$6,000 or \$7,000 if the individual is over the age of 50.

**2. The Power of Roth:** A Solo 401(k) Plan can be made in pre-tax or Roth (after-tax) format. Whereas, in the case of a Traditional Self-Directed IRA, contributions can only be made in pre-tax format. In addition, for 2019, a contribution of \$19,000 (\$25,000, if the plan participant is over the age of 50) can be made to a Solo 401(k) Roth account.

**3. Tax-Free Loan Option:** With a Solo 401(k) Plan, you can borrow up to \$50,000 or 50% of your account, value what ever is less. The loan can be used for any purpose. With a Traditional Self-Directed IRA, the IRA holder is not permitted to borrow even \$1 from the IRA without triggering a prohibited transaction.

**4. Use Non-recourse Leverage and Pay No Tax:** With a Solo 401(k) Plan, you can make a real estate investment using non-recourse funds without triggering the Unrelated Debt Financed Income Rules and the Unrelated Business Taxable Income (UBTI or UBIT) tax (IRC 514). However, the non-recourse leverage exception found in IRC 514 is only applicable to 401(k) qualified retirement plans and does not apply to IRAs. In other words, using a Self-Directed SEP IRA to make a real estate investment (Self Directed Real Estate IRA) involving non-recourse financing would trigger the UBTI tax.

**5. Open the Account at Most Local Banks:** With a Solo 401(k) Plan, the 401(k) bank account can be opened at most local banks and major financial institutions, such as Wells Fargo, Fidelity, Schwab, E-Trade, TD Ameritrade, Bank United, etc. However, in the case of a Traditional Self-Directed IRA, a special IRA custodian is required to hold the IRA funds.

**6. Option of Using an LLC:** With a Solo 401(k) Plan, you have the option of establishing a cryptocurrency exchange account in the name of the 401(k) Plan or alternatively in the name of a special purpose LLC.

**7. Better Creditor Protection:** In general, a Solo 401(k) Plan offers greater creditor protection than a Traditional IRA. The 2005 Bankruptcy Act generally protects all 401(k) Plan assets from creditor attack in a bankruptcy proceeding. In addition, most states offer greater creditor protection to a Solo 401(k) qualified retirement plan than a Traditional Self-Directed IRA outside of bankruptcy.

**8. Easy Administration:** With a Solo 401(k) Plan, there is no annual tax filing or information returns for any plan that has less than \$250,000 in plan assets. In the case of a Solo 401(k) Plan with greater than \$250,000, a simple 2 page IRS Form 5500-EZ is required to be filed. The tax professionals at the IRA Financial Group will help you complete the IRS Form.

**9. IRS Approved:** The Solo 401(k) Plan is an IRS approved qualified retirement plan. IRA Financial Group's Solo 401(k) Plan comes with an IRS opinion letter which confirms the validity of the plan and is a safeguard against any potential IRS audit.

**10. Open Architecture Plan:** IRA Financial Group's Solo 401(k) Plan is an open architecture, self-directed plan that will allow you to make traditional as well as nontraditional investments, such as cryptocurrencies. As trustee of the Solo 401(k) Plan, you will have "checkbook control" over your retirement assets and make the investments you want when you want.

## Tax Advantages of Using a Solo 401(k) Plan to Invest in Cryptocurrency

The IRS tax treatment of virtual currency has created a favorable tax environment for retirement account investors. In general, when a retirement account generates income or gains from the purchase and sale of a capital asset, such as stocks, mutual funds, real estate, etc., irrespective of whether the gain was short-term (held less than twelve months) or long-term (held greater than twelve months), the retirement account does not pay any tax on the transaction and any tax would be deferred to the future when the retirement account holder taxes a distribution (in the case of a Roth IRA or Roth 401(k) Plan no tax would be due if the distribution is qualified). Hence, using retirement funds to invest in cryptocurrencies, such as Bitcoins, could allow the investor to defer or even eliminate, in the case of a Roth, any tax due from the investment. **Note:** retirement account investors interested in mining Bitcoins versus trading could become subject to the Unrelated Business Taxable Income tax rules if the “mining” constituted a trade or business.

### So, Why Use a Solo 401(k) Plan to Buy Cryptocurrencies?

- Gains are tax-free.
- No time limit for holding property - no need to worry about 12 month holding period for long term capital gain treatment.
- Potential to earn a larger rate of return on invested capital.
- Invest in what you know and understand.
- Diversify your retirement portfolio from over-exposure to Wall Street.
- Protect your retirement funds from inflation or a falling U.S. dollar.
- Invest with privacy.

## How to Use a Solo 401(k) Plan to Invest in Cryptocurrency

Working with IRA Financial Group to purchase cryptocurrencies, such as Bitcoins, Ethereum, Ethereum Classic, or Litecoins, with a Solo 401(k) Plan is quick and easy.

1. Work with IRA Financial Group to establish an IRS approved self-directed open architecture Solo 401(K) Plan. IRA Financial Group's experts will work with you one-on-one to customize your Self-Directed Solo 401(k) Plan to satisfy your retirement and investment goals. You will receive an IRA opinion letter confirming the legality of the plan.
2. Rollover retirement funds, cash or in-kind, tax-free to the new Self-Directed Solo 401(K) Plan account. **Note:** Roth IRA funds cannot be rolled into a Solo 401(k) Plan. Your assigned 401(k) specialists will help you with the rollover process.
3. You, as trustee of the Solo 401(k) Plan, can then establish your self-directed Solo 401(k) Plan with most traditional banks or financial institutions. IRA Financial Group has relationships with many of the major banks and financial institutions, such as Wells Fargo, Fidelity, E-Trade, Charles Schwab, TD Ameritrade, Bank United, etc.
4. You, as trustee of the Solo 401(k) Plan, will then have "Checkbook Control" over all the assets/funds in the Solo 401(k) Plan to make the cryptocurrency investment.
5. With a Solo 401(k) Plan, you have two options when opening a cryptocurrency account with an exchange:
  - a. **Open account in name of 401(k) Plan:** You can open the account in the name of the Solo 401(k) Plan. IRA Financial Group will provide you with all the necessary Solo 401(k) Plan documentation to open the account, including a Tax ID#. The cryptocurrency exchange Gemini has a special account application for 401(k) Plans.
  - b. **Establish a special purpose LLC:** A special purpose LLC would be established that would be owned 100% by the 401(k) Plan. The cryptocurrency account with the exchange of your choice would be opened in the name of the LLC. We have helped hundreds of clients establish cryptocurrency accounts for their Self-Directed Solo 401(k) Plan at most of the popular cryptocurrency exchanges, including Coin Base, Gemeni, Bitrix, Cumberland Mining, etc.
6. You, as trustee of the Solo 401(k) Plan, will then wire the funds from the 401(k) Plan to the newly established LLC. The LLC Operating Agreement will show the 401(k) Plan as the sole owner of the LLC and you as the manager of the LLC. The LLC will have its own Tax ID#. Since the LLC is owned 100% by the 401(k) Plan, it will be treated as a disregarded entity for tax purposes. No Federal income tax return is required to be filed and all income and gains from the cryptocurrency investment will flow back to the 401(k) Plan without tax.
7. You, as manager of the LLC, will then wire the LLC funds to the new cryptocurrency account opened at the exchange. The exchange account will then be opened in the name of the LLC. At that point, you can link your LLC bank account with the newly established crypto exchange account and fund the new account as soon as possible.

### SOLO 401(K) FLOW CHART

**Cryptocurrency investments, such as Bitcoins, are risky and highly volatile. Any investor interested in learning more about Bitcoins should do their diligence and proceed with caution.**

The IRA Financial Group will take care of the entire setup of your Self-Directed Solo 401(k) Plan. "Checkbook Control" structure. The whole process can be handled by phone, email, fax, or mail, and typically takes between 1-2 days to complete. Our 401(k) plan experts and tax professionals are on-site, greatly reducing the setup time and cost. Most importantly, each client of the IRA Financial Group is assigned a tax professional and CPA to help with the establishment, operation, and maintenance of the IRS approved. Self-Directed Solo 401(k) Plan.

## The Best Way to Purchase Cryptocurrencies Tax-Free

When purchasing cryptocurrencies, such as Bitcoins, with a Self-Directed Solo 401(k) Plan, all income and gains generated by your pre-tax retirement account investment would generally flow back into the retirement account tax-free. Instead of paying tax on the returns of the crypto investment, tax is paid only at a later date, leaving the investment to grow unhindered.

For example, Ben who is 35, established a Self-Directed Solo 401(k) Plan with \$10,000 to purchase cryptocurrencies and make other investments. Assume Ben kept his Self-Directed Solo 401(k) Plan open for 30 years. Further assume that Ben was able to generate an average annual pre-tax rate of return of 15% and the average tax rate was 25%. By using a tax-deferred Self-Directed Solo 401(k) Plan strategy, after 30 years Ben's \$10,000 investment would be worth \$662,117.72 - a whopping \$417,211 after taxes on the earnings. Whereas, if Ben made the investments with taxable funds (non-retirement funds) Ben would have only accumulated \$244,906.66 after 30 years.

## What Kind of Cryptocurrencies Can I Purchase with Retirement Funds?

The Internal Revenue Code does not describe what a Solo 401(k) Plan can invest in, only what it cannot invest in. Internal Revenue Code Sections 408 & 4975 prohibit the 401(k) plan participant and his or her lineal descendants ("disqualified persons") from engaging in certain types of transactions that would directly or indirectly personally benefit a "disqualified person". Therefore, one can use retirement funds to purchase any type of cryptocurrencies, such as Bitcoins, Litecoin, Ethereum, Ethereum Classic, Zcash, Dash, Ripple, Monero.

## Tips When Purchasing Cryptocurrencies with Retirement Funds

- Make sure you only use retirement funds to purchase the cryptocurrencies.
- Make sure the cryptocurrency exchange account is opened in the name of the 401(k) plan or a special purpose LLC, if applicable.
- Do not purchase or sell the cryptocurrencies to yourself or any other disqualified person.
- Be sure to link your Solo 401(k) plan or special purpose LLC account, if applicable, and not a personal account to the cryptocurrency exchange account.
- Do not hold the cryptocurrencies in a wallet that also holds cryptocurrencies owned by the 401(k) Plan participant personally or any disqualified person.
- All income/gains or losses should flow from the cryptocurrency investment directly to the Self-Directed 401(k) Plan.
- Work directly with a tax professional who has expertise in the IRS prohibited transaction rules.
- Understand and weigh the risks and rewards involved in using a retirement account to invest in cryptocurrencies.

## The Self-Directed IRA LLC Cryptocurrency Advantage

- **"Checkbook Control":** You no longer have to wait for a cryptocurrency company to execute your crypto transaction and pay high commissions. Instead, as trustee of the Self-Directed Solo 401(k) Plan, all decisions are truly yours. Buying cryptocurrency is as easy as doing a wire!
- **Tax Advantages:** You have all the tax advantages of a traditional 401(k) Plan, as well as tax deferral and tax-free gains if you use the Roth 401(k) option. All income or gains from the sale of the cryptocurrency investment go back to the Self-Directed Solo 401(k) Plan tax-free!
- **Investment Options:** You can invest in any type of cryptocurrency, such as Bitcoins or Ethereum.
- **Speed:** When you decide to buy cryptocurrencies with your retirement funds, simply write a check or wire the funds straight from your Self-Directed 401(k) or special purpose LLC account, if applicable, to make the investment.
- **Retirement & Investment Vehicle All in One:** Save for your retirement, contribute up to \$62,000, while gaining the ability to make cryptocurrency and other investments without paying tax.

### Getting Started

IRA Financial Group will take care of setting up your entire IRS compliant Solo 401(k) Plan Cryptocurrency solution. The whole process can be handled by phone, e-mail, fax, or mail and typically takes between 1-2 days to complete, the timing largely depending on the state of formation and the custodian holding your retirement funds. Our tax and ERISA professionals are on-site greatly reducing the setup time and cost. Most importantly, each client of the IRA Financial Group is assigned a retirement tax professional to help with the establishment of the Solo 401(k) Plan and provide one-on-one consultation.

If you would like to get started on establishing your Solo 401(k) Plan Cryptocurrency solution, please contact a retirement tax specialist at:
