Benefits for Institutions & Advisors

Generate fees from your clients' alternative asset investments and gain online access to client accounts .

We Have Experience

We have expertise in the custody of all domestic and international alternative asset categories.

Member of the Retirement Industry Trust Association (RITA).

What is Cryptocurrency?

Cryptocurrency is a form of digital money that is designed to be secure and, in many cases, anonymous. It is a currency associated with the internet that uses cryptography, the process of converting legible information into an almost uncrackable code, to track purchases and transfers.

The first cryptocurrency was Bitcoin, which was created in 2009, and is still the best known. There has been a proliferation of cryptocurrencies in the past decade and there are now more than 1,000 available on the internet.

What is Bitcoin?

We call Bitcoin digital currency or money, but really it is just a computer program. People trade Bitcoin with each other directly, or buy and sell through online exchanges.

Anyone with a computer and an internet connection can download the software, which comes with something called a wallet, a place to store your Bitcoin balance. A Bitcoin holds a very simple data ledger file called a block-

chain. Each blockchain is unique to each individual user and his/her personal Bitcoin wallet. That wallet has an address—a long string of numbers and letters, called the public key—that lets people find the account on the network. Anybody can send bitcoin into a wallet. Taking money out of that wallet, though, requires control of what is called the private key, another long string of letters and numbers.

Cryptocurrency and The IRS

How are Cryptocurrencies Treated by the IRS?

In the U.S even though Bitcoin is labeled as a “cryptocurrency,” from a federal income tax standpoint, Bitcoin and other cryptocurrency are not considered a “currency.” On March 25, 2014, the IRS issued Notice 2014-21, which for the first time set forth the IRS position on the taxation of virtual currencies, such as Bitcoin. According to the IRS Notice, “Virtual currency is treated as property for U.S. federal tax purposes.” The Notice further stated “General tax principles that apply to property transactions apply to transactions using virtual currency.”

In other words, the IRS is treating the income or gains from the sale of a virtual currency, such as Bitcoin, as a capital asset, subject to either short-term (ordinary income tax rates) or long term capital gains tax rates, if the asset is held greater than twelve months (15% or 20% tax rates based on income). By treating Bitcoins and other virtual currencies as property and not currency, the IRS is imposing extensive record-keeping rules - and significant taxes - on its use.

Does the IRS Allow Retirement Accounts to Purchase Cryptos?

The Internal Revenue Code does not describe what a Self-Directed retirement plan can invest in, only describes what it **cannot** invest in. Internal Revenue Code Sections 408 & 4975 prohibits Disqualified Persons from engaging in certain type of transactions. The foundation of the prohibited transaction rules is based on the premise that investments involving a retirement plan and related parties are handled in a way that benefits the retirement account and not the IRA owner. The rules prohibit transactions between the IRA and certain individuals known as “disqualified persons”. The definition of a “disqualified person” (Internal Revenue Code Section 4975(e)(2)) extends into a variety of related party scenarios, but generally includes the IRA holder, any ancestors or lineal descendants of the IRA holder, and entities in which the IRA holder holds a controlling equity or management interest.

Because the IRS treats cryptocurrencies, such as Bitcoin, as a capital asset, such as stocks or real estate, a retirement account is permitted to buy, sell, or hold cryptocurrencies in

their retirement subject to the prohibited transaction rules found under Internal Revenue Code Section 4975(c).

Best way to buy cryptos with your retirement account

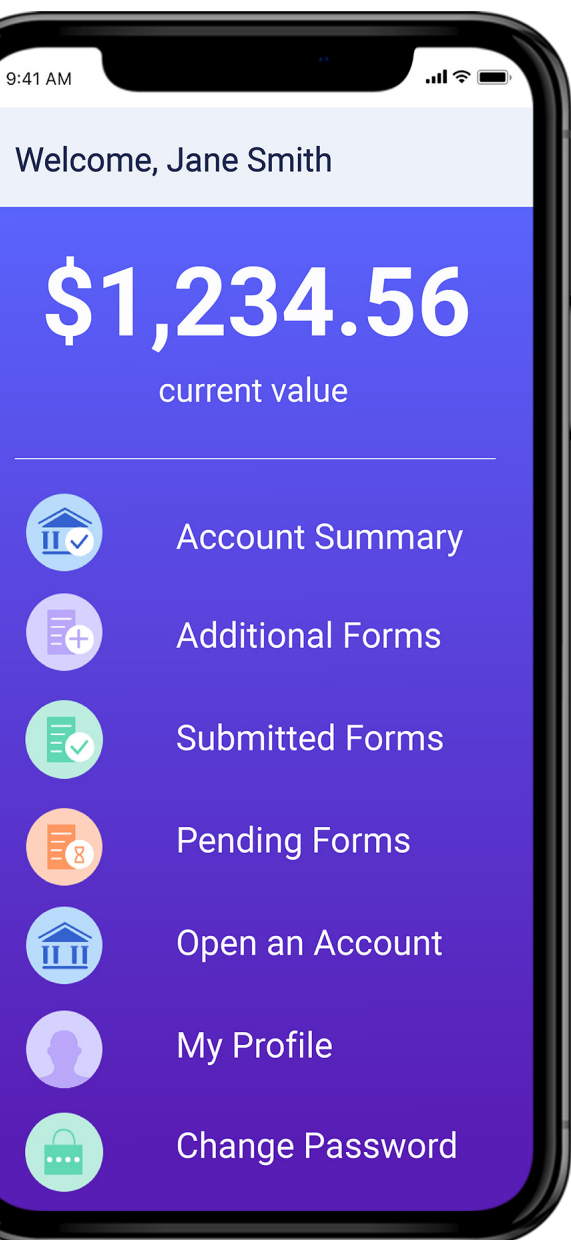

In general, when a retirement account generates income or gains from the purchase and sale of a capital asset, such as stocks, mutual funds, real estate, etc., irrespective of whether the gain was short-term (held less than twelve months) or long-term (held greater than twelve months), the retirement account does not pay any tax on the transaction and any tax would be deferred to the future when the retirement account holder taxes a distribution (in the case of a Roth IRA or Roth 401(k) plan no tax would be due if the distribution is qualified). Hence, using retirement funds to invest in cryptocurrencies, such as bitcoins could allow the investor to defer or even eliminate, in the case of a Roth, any tax due from the investment.

In addition, using a Self-Directed IRA to purchase Bitcoin offers you a way to diversify your retirement portfolio while gaining exposure to an emerging asset class.

Cryptocurrency investments, such as Bitcoin, are risky and highly volatile. Any investor interested in learning more about bitcoins should do their diligence and proceed with caution.

Do Everything in our App

1. Open an account

Open a Self-Directed IRA account on [our app](#) or call us at [800-472-1043](#).

2. Roll Over Funds

[Transfer, rollover or make a IRA contribution](#) to your new Self-Directed IRA.
